## Can Table Boss be configured to other business?

Posted by Vertti - 2007/09/23 02:30

---

For example beautyparLOURS and salons? There has been few questions about making reservation possible via internetsites and both business has been from this area.

Interface was beautiful and very simple to use and I would like to use this reservation-component, if it is possible..?

Thanks for your feedback.

The TableBOSS plugin is a solution for on line booking and management of restaurant reservations, however nothing prevents you from using it for other types of reservations if you can find a way to configure it to suit those needs.

So say for a nail or beauty salon each table would be a nail / hair chair can even give it a person's name like table 1 - Sally, seats 1, average meal time is average nail time...say 1 hr.

Only problem I see is that they can't select how long i.e. manicure / pedicure takes longer than just a manicure.

Is there a work around for this?

I have some other questions unrelated to this I will be contacting sales.

Cheers,

R

From the Reservation Desk, the length of the reservation can be set using "Duration" field.

Hi,

I am also interested in using this component for a salon and want to know if you have had success in this?

If so, perhaps you could post some of the methods used to configure the component?

Many Thanks  
matt

Has anyone successfully used this for a salon-type business? I'm really interested and it seems as though it should work but I'm wondering if there were any hurdles to overcome and/or how difficult was the modification.

Thanks in advance. Looking forward to any replies.

Yes , a version that could be used for hair salons would be fantastic.

I would like to use TableBoss for a clinic. Is there a language file where some of the frontend text can be changed--for example, instead of "Choose A Meal", can it easily be changed to "Choose Morning orAfternoon"?

My situation is a bit different. For our school we have 3 labs that teachers would like to be able to schedule the usage for said labs. I think this looks great, but how customizable is it?

I also would like to use it for a clinic situation where a person could schedule with different therapists at a pre-determined time slot. Some people make reservations for 1hr, some for 90 minutes.
