
Version 2.0.4 is now available

Posted by fabrizim - 2007/10/11 20:50

The new version includes some great new features, including:

Email Validation

It is now possible to require online reservations to be validated. A customer will receive an email with a validation link to confirm their reservations. You can access this under the "Reservation Wizard" Tab in configuration.

Reservation Notes

A new "Notes" field is now present for reservations (included in the Reservation Wizard.) It is also available when editing reservations via the Reservation desk.

Search functionality

Now a main tab in the Reservation Desk, this feature allows you to quickly search for reservations by Name, Email, and Phone.

Context menus

We added right-click context menus for both the List of Reservations in the Reservation Desk, as well as the Search Results. This allows you to go right to a reservation in Floor Plan view, or Reservation List view, as well as direct links to Edit / Delete (if applicable).

--

We are still in the process of adding more features that you have requested. As these features become available we will let you know in both this forum as well as our newsletter.

Also, our documentation is still being updated. You will see all of the changes in the application help as they are made.

Best Regards-
Mark
