## Firefox 3.0

Posted by Jessica - 2008/07/16 17:34

---

I just tried out your demo front end reservation and it doesn't work in Firefox 3.0  
The calendar stretches across the entire screen and you cannot see any dates.  
Just thought I'd let you know.

Is there something you could do for me as well? I'm running FF 3.0 as well and when I demo the site it does the same thing. In house I still have the client on FF 2.

please PM me and I'll send you the site and login details if you need them.

For now, the fix is to add the following code to the css for your template:

```
body .x-date-middle {  
    padding-top:2px !important;  
    padding-bottom:2px !important;  
    width:130px !important; /* FF3 */  
}
```

We will include that code in the next update.

Best Regards-  
Mark
