
2.0.5 Now Available

Posted by fabrizim - 2007/10/24 22:39

2.0.5 is now available.

2.0.5 contains several bug fixes as well as a new Danish Language translation.

Most of the bug fixes are related to alternate languages. The time display for non-US countries is now set to a 24 hour clock. This will be configurable in a future release.

The application no longer depends on the mb_string library being compiled with the php version.

We are still working on more updates, so stay tuned as we get closer to another release.

-Mark

FYI - the latest version is 2.0.5b due to some internal revisions.
