## 2.0.6 Now Available

Posted by fabrizim - 2007/10/31 22:21

---

TableBoss 2.0.6 is now available.

This minor release address several bugs that have been reported. No major functionality has been added in this release.

Minor Bugs fixed:

Fixed the Icelandic language/country code from id\_ID to is\_IS  
Fixed an error that kept images from showing correctly in Joomla 1.5 RC3  
Fixed several internal php errors that kept pages from displaying correctly.  
Fixed a bug that threw an error when php did not have mb\_string library compiled.  
Added a better Dutch language file (thanks to Roy Heinsius).

We are working on some new features that many have been asking for. We will let you know once we have another new release.

Best Regards-  
Mark
