
tableboss not working on localhost

Posted by ofadeyibi - 2010/08/16 02:57

Hi,

After installing tableboss successfully on localhost i crated two links, one for public and other for admin frontend. Now when i click on the admin frontend page i can see the Reservation Desk but i can't find the Tables that i have added from the backend into the layout section. It is only displaying the loading image. I also tried other tabs but again the same problem only loading is displayed.

I tried the same thing with the live site. Everything is working fine on the live server. I really can't figure out what's the problem.

I have attached screen shot here so you can have quick idea of the problem.

Thanks in advance.

We will need access to the install to be able to understand what's going on there.

We can look at between 9am-5pm EST via gotomeeting or you need to grant us access through your firewall.

We can initiate a gotomeeting session if that's your preference. Just let me know what time would work best, and provide your direct e-mail, and I will e-mail the invitation for a GoToMeeting session.

Hi Mark,

Thanks for quick reply.

I think gomeeting is the best option. I will be available from 9 am to 11 am EST. I have sent my mail id to support@tableboss.com. Let me know when you are ready for the gommeeting session.

Thanks
